

U.S. DEPARTMENT OF ENERGY

Northwest Clean Energy Application Center

April 2010

**Clean Heat and Power Specialists
and U.S. Department of Energy - Qualified
Industrial Energy Efficiency Specialists**

In Alaska, Idaho, Montana, Oregon, and Washington

Areas of Expertise

<u>Steam Systems</u>	<u>Process Heating</u>
<u>Pumping Systems</u>	<u>Compressed Air</u>
<u>Fan Systems</u>	<u>Clean Heat & Power (CHP)</u>

Introduction

Industrial energy efficiency and CHP encompass a wide range of expertise, analytical software tools and technologies.

The U.S. Department of Energy certifies industrial energy specialists as part of their Industrial Technologies Program <http://www.eere.energy.gov/industry/>. The northwest states have teamed together with other industrial energy efficiency specialists, and with the Northwest Clean Energy Application Center www.northwestcleanenergy.org/, to present this list of Specialists by area of expertise. This list changes over time as new people receive their certification so refer to the DOE website for the most current list: http://www.eere.energy.gov/industry/bestpractices/qualified_specialists/.

If you are interested in becoming a qualified specialist, take one of the DOE classes: http://www.eere.energy.gov/industry/bestpractices/events_calendar.asp. Training sessions of 15 attendees or more may also be coordinated in the Northwest by contacting the Washington State University Extension Energy Program industrial training coordinator at 360-956-2137 or epis@energy.wsu.edu.

Energy assessments by specific expert area may be obtained from the individuals/organizations on this list, in some cases at no charge. CHP systems also require expertise to develop projects; for more information on how to access expertise in this area see the CHP contact names listed below.
